

Bruno Li Bittencourt

Brazil | Shenzhen-focused | brunolb2002@gmail.com | WeChat: brunolb02

PROFESSIONAL SUMMARY

Backend Software Engineer with 5+ years of experience designing and building scalable, data-intensive systems, including cloud-native platforms and IoT-integrated architectures. Core developer of a production SaaS platform managing distributed security hardware for thousands of deployments across Latin America.

Currently transitioning toward Data Science and Artificial Intelligence, with a focus on applying machine learning to real-world systems such as intelligent security platforms and IoT analytics. Fluent in Mandarin Chinese with extensive academic and professional experience in China.

WORK EXPERIENCE

Intelbras

2020 – Present

Backend Software Developer — R&D Division, Electronic Security

Brazil (Remote)

Brazil's leading provider of electronic security and IoT solutions, serving millions of users across Latin America. Joined as an intern in 2020 and hired full-time in 2021.

Key Project: Guardian Partner — B2B Security Management Platform

Core developer of a cloud-based, multi-tenant SaaS platform enabling centralized management of electronic security systems including CCTV devices, alarm panels, intercoms, and access control systems. Joined the project at inception in 2021 and have remained one of its principal engineers.

Key Contributions

- Designed and implemented backend architecture for a large-scale multi-tenant SaaS platform handling thousands of concurrent device connections
- Built and maintained RESTful APIs and microservices supporting frontend applications and third-party hardware integrations
- Developed event-driven data pipelines using Apache Kafka for real-time processing of device telemetry, event logs, and user interactions
- Integrated hardware SDKs (CCTV, alarm, access control) into backend systems, abstracting device protocols into standardized, scalable APIs
- Modeled and optimized relational (PostgreSQL) and NoSQL (MongoDB, Redis) databases for high-performance and scalable workloads
- Implemented authentication and authorization systems (OAuth2, JWT, RBAC) aligned with LGPD data protection requirements
- Designed and maintained CI/CD pipelines and cloud infrastructure using AWS services (Lambda, S3, EventBridge, CloudWatch, IAM)
- Contributed to architecture decisions, technical planning, and agile development processes across the full project lifecycle

TECHNICAL SKILLS

Languages:	Java (Spring Boot), TypeScript / JavaScript (Node.js, NestJS), C# (.NET), Python
Architecture:	Microservices, RESTful APIs, Event-Driven Systems, Cloud-Native Design
Databases:	PostgreSQL, MongoDB, Redis
Streaming:	Apache Kafka, AWS SQS / SNS

Cloud & DevOps: AWS (Lambda, S3, EventBridge, IAM, CloudWatch), Docker, CI/CD Pipelines
Security: OAuth2, JWT, Role-Based Access Control (RBAC)
Data Science: Python (NumPy, Pandas), statistical analysis, supervised learning concepts

LANGUAGES

Portuguese: Native
Chinese: Advanced — professional working proficiency
English: Advanced — professional working proficiency

EDUCATION

Bachelor's Degree in Information Systems Completed: December 2025
Universidade do Sul de Santa Catarina (UNISUL), Brazil
Academic Standing: 9.08 / 10.00 | GPA (WES conversion): 3.71 / 4.00

Chinese Language Studies

Tsinghua University, Beijing | University of International Business and Economics (UIBE), Beijing
Pursued formal Mandarin Chinese language training during extended period of residence in China

ADDITIONAL INFORMATION

- Over three years of cumulative experience living in China, including academic studies in Beijing and recent visit to Shenzhen
- Chinese grandfather and Chinese girlfriend — deep personal and cultural ties to China beyond academic or professional context
- Strong cross-cultural communication skills and direct familiarity with China's technology and startup ecosystem
- Actively developing data science foundations: statistical learning, Python-based data processing, and machine learning methodologies
